

# Secure, Connected Test Systems

## Modernize Test – Without Risk

Test Partner securely connects functional test systems while isolating them from network threats. It delivers real-time visibility, remote access, and analytics—without exposing production to cyber risk.

### Secure Your Test Systems

Blocks unauthorized access and protects test environments from modern cyber threats—without traditional VPNs.

### Maintain Production

Enables remote support and visibility to reduce downtime and keep lines running, even across global sites.

### Turn Test Data into Insight

Connect modern and legacy test systems—even untrusted ones—to secure analytics, enabling faster decisions and continuous

improvement. Reconnect legacy testers and unlock valuable data without introducing security risks.

### Protect Your Data

Preserves, backs up, and securely delivers test data—even during outages or network disruptions.

## How It Works

### Global Test Systems

Works with any operating system, including obsolete systems

### Analytics & Insights

Analytics & Intelligence  
Backup & Continuity

### Data Protection & Backup

Secure Remote Access  
Secure File Transfer

### Data Integration

Data Integration

Compatible with major analytics packages such as WATS, NI SystemLink, and Keysight Pathwave.
